

IN THE CLAIMS

Please amend the claims as follows:

1 (Currently Amended): An information processing apparatus comprising:

a first user interface configured to receive instructions to schedule recording of a moving picture corresponding to a received television broadcast signal at a future date;

first recording means for recording said moving picture in at least one recording increment;

second recording means for recording a still picture corresponding to a predetermined one of said recording increments of said moving picture;

third recording means for recording information about said moving picture being recorded by said first recording means;

a second user interface configured to receive a user instruction to modify said moving picture recorded in at least one recording increment recorded in said first recording means,

wherein

the first user interface is configured to display a quantity of data recorded in at least the first recording means, and an indication of approximate available recording times for each of a plurality of recording modes.

2 (Original): An information processing apparatus according to claim 1, wherein said second recording means records a still picture corresponding to a scene switchover of said moving picture.

3 (Original): An information processing apparatus according to claim 1, wherein said first recording means uses a file as said recording increment.
